

STRENGTHENING COMMUNITY RESILIENCE: MALARIA PREVENTION

MALARIA IN SOUTHEAST ASIA

Almost **20%** of the population in Southeast Asia are at high risk of malaria transmission

Growing concern:

DRUG RESISTANCE

Resistance to artemisinins

ALL ABOUT MOSQUITOES

The malaria-carrying female, anopheles mosquito usually bites at night

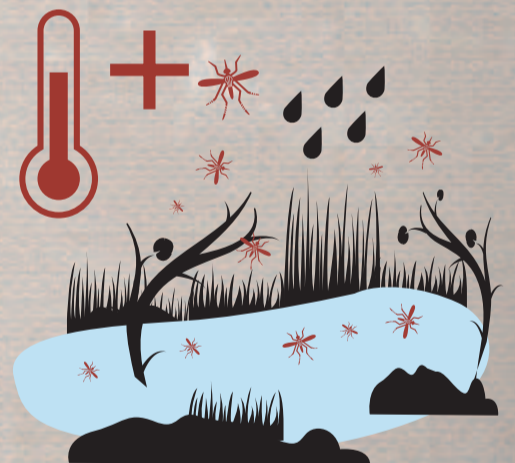

One mosquito bite is enough to transmit malaria

Hot, humid environments are most suitable to mosquito growth and survival

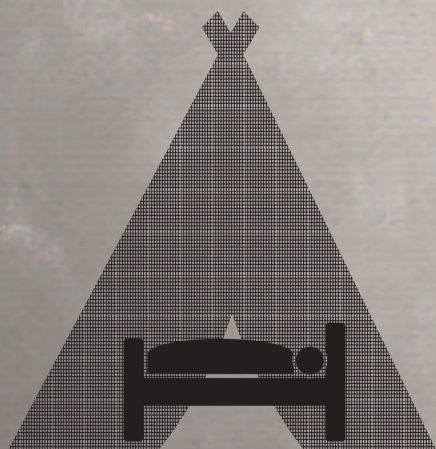

Mosquitoes breed in ponds, marshes, swamps and other wetland habitats

PROTECT YOURSELF AND FAMILY

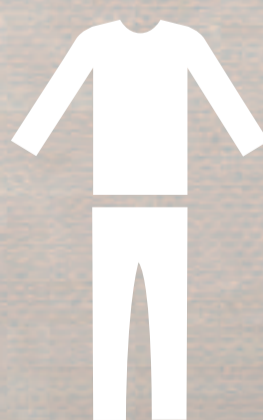

Sleep under long lasting insecticide treated bed nets

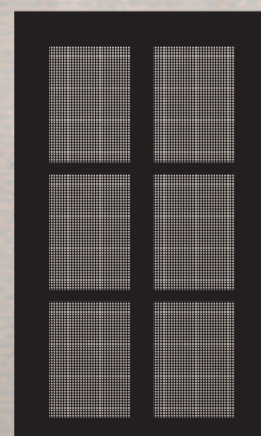

Get rid of stagnant water from places where mosquitoes breed, such as old containers, flower pots and used tires

Wear light-coloured, long-sleeved shirts and trousers

Install a window screen

Use mosquito repellent
